How to create Mac OS X bootable USB installation media Before you can use TransMac, you may first need to partition your USB flash drive with a GPT partition, as a normal MBR partition may not work.. If you're still using a Mac OS X the time will come when your computer won't boot, or a problem may arise where you can't take control of the device, and booting from an OS X installation media will be required.. Before we start, let's download a dmg file from the public domain I found one on Apple's article about The XMLHttpRequest Object website while I was learning Ajax and that can be downloaded from this link.
